

NO. 1340 - HOME BUILDING SPECIFICATION AND PLOT PLAN

Slip on Backbone Binding

Outside Size: 8½" x 11"
Inside Page Size: 8" x 10⅝"
(24 individual pages, printed on only one side)

Detailed specifications along with blueprints are necessary for every loan made for the building of a new home. These specifications constitute the binding agreement between the home owner and the contractor.

Our specifications have been in regular use by hundreds of building and loan associations, banks, lumber dealers and contractors for over 30 years. They are a must in making a loan for the building of a new home.

Your name may be imprinted on the front cover on orders of 100 copies or more. Quotes available upon request.

The use of these specifications avoids costly misunderstandings later on. No loan on a new home should be consummated without a complete set of specifications properly filled in and signed.
